

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A resin molded article produced by injection molding and crystallizing a composition comprising a crystallizable, biodegradable plastic resin containing a polylactic acid as its main component, a glass fiber, and a hollow glass balloon which has been surface treated with a coupling agent,

said molded article having a heat distortion temperature of at least 80°C and a density of up to 1.2 g/cm³, and

~~said molded article having an impact strength higher than one having the same components which had not been surface treated with a coupling agent.~~

2. (currently amended): A resin molded article produced by molding and crystallizing a composition consisting of according to claim 1, wherein the composition consists of 60-85 % by weight of polylactic acid, 7.5 to 20 % by weight of said a glass fiber and 7.5 to 20 % by weight of said a hollow glass balloon which has been surface treated with a coupling agent, based on the total weight of the biodegradable plastic resin, the glass fiber, and the hollow glass balloon resin molded article; the content in % by weight of the glass fiber is up to 1.9 folds of the content in % by weight of the hollow glass balloon,

said molded article having a heat distortion temperature of at least 80°C and a density of up to 1.2 g/cm³.
